

4003 Stainless Steel

The winning formula for modern applications.

4003, a corrosion resistant steel containing 11% chromium provides designers with an alternative which displays both the advantages of stainless steel (resistance to corrosive attack) and engineering properties on a par with carbon steel (strength similar to St. 52). This combination opens up a wide range of applications.

These qualities have led to the use of type 4003 stainless steel in many applications across a wide range of industries.

Typical Applications:

- Cable trays
- Chimneys and ducting
- Enclosures and cabinets
- Vehicles frames/chassis
- Sweeper and gritter vehicles
- Bulk wet materials handling
- Rail car hoppers
- Conveyors, chutes, screens & troughs
- Bunkers & hoppers
- Walkways, stairs & railings
- Ship building

Available from ThyssenKrupp Materials (UK) in 1.5mm to 4mm thickness.
